Fixed Index Annuities With Income Riders (FIAs)

Fixed Index Annuities offer advantages when it comes to both saving for retirement, as well as receiving an ongoing, guaranteed lifetime income.

Fixed Index Annuities (FIAs) typically have a benefit called a lifetime income rider that can be attached to it. Income riders are an option that came about because people wanted to have a guaranteed income for life but still wanted to maintain control of their money. They wanted it to be there for future income, but also wanted access to it if they changed their mind or had an emergency.

With an FIA you can have both a fixed rate of return and/or the option of a return linked to the growth of a stock market index. You also have a lifetime income feature that can be turned on whenever you want your income to start.

As with other types of annuities, the funds that are inside of a hybrid annuity are allowed to grow on a tax-deferred basis. This means that the money will not be taxed until the time it is withdrawn.

With an FIA, you can obtain a number of benefits, including safety of principal, the potential for growth, and guaranteed income for life. These financial vehicles can help to eliminate the fear in most retirees' and pre-retirees' minds today – that of outliving your money in retirement.

Multi-Year Guaranteed Annuity (MYGA)

Multi-Year Guarantee Annuities, or MYGA's, are a type of fixed annuity that provides a set interest rate guarantee for a certain period of time. MYGA's are structured to function in a similar manner to Certificate of Deposit or bonds.

In terms of similarities, both a CD and a MYGA will provide their holders with a guaranteed fixed rate of interest for a set period of time. However, it is important to note that CD's are backed by FDIC insurance while the MYGA annuities are backed by the claims-paying ability of the issuing insurance company.

One other difference is, interest that is earned on a Certificate of Deposit is considered to be taxable on an annual basis if it is not within an IRA or other qualified account. Conversely, the interest that is earned on a MYGA is allowed to grow tax-deferred, and will only be taxable upon withdrawal. This can allow the funds to compound tax deferred over time.

Another important factor for some, is many MYGA annuities allow you to withdraw up to 10% of your principal and interest each year with no early withdrawal penalties or fees (not all MYGA's offer the 10% free withdrawal, so check before you purchase).

Single Premium Immediate Annuity (SPIA)

Immediate annuities are best used to create immediate income. With a single premium immediate annuity, or SPIA, a single sum is deposited in return for a stream of income that typically starts approximately one month after the deposit is made.

The income stream is generated from the funds based on an assumed annual growth rate, as well as the withdrawal period that is chosen, and the age and gender of the recipient.

In most cases, you can choose from a number of different income payout periods such as a certain number of years, or for the remainder of your life – regardless of how long that may be. Income may also be paid out to a joint recipient such as a spouse for the remainder of his or her lifetime as well.

Because an immediate annuity converts a lump sum into an income stream, the funds you use for the annuity will no longer be available in case of an emergency. Therefore, be sure you still have liquid assets available for other needs.
